COVER LETTER

Dear Jason Buck and Firstline team, **February 24, 2025**

I hope this letter finds you well. I am writing to express my interest in joining Firstline's efforts to make reliable information more accessible to clinicians. With my background in both computer engineering and physiology, I am excited about the opportunity to contribute to a company that merges technology and healthcare to help people.

I completed my first degree in Physiology and Pharmacology at the University of Saskatchewan, where I developed a strong passion for the human body and health sciences. Now, as a Computer Engineering student at Simon Fraser University, I have gained hands-on experience in software development, embedded systems, and digital circuit design. I have worked at the board level with FPGAs, focusing on hardware-software integration for real-time systems, developing a solid understanding of digital logic design, VHDL, and C/C++ programming. In addition to embedded development, I have also contributed to solely software projects involving system analysis and multi-threaded programming.

What excites me most about Firstline is the opportunity to apply my technical skills in a healthcare-focused environment. Working at the intersection of healthcare and technology feels like the perfect way to bring both of my worlds together, and I would love the opportunity to contribute to your team.

Thank you for the opportunity to express my interest in working alongside the talented team at Firstline. I would appreciate the chance to connect and learn more about you and your work. Please let me know if you'd be open to a conversation.

Sincerely,
Rose Epstein
